This new feature is a wonderful start to the future of Tone Panel performance. (There's no way I'm going to say that AI worked on Lightroom 5's Tone panel. That's ridiculous to even suggest, and I don't want to put the rest of my credibility on the line by admitting that.) This new feature gives some hope for Lightroom's future performance on some basic features (but not the whole panel). I'm sure the AI team is working on non-Epson-based printers as well. It would be nice to see Tone tools that can be used with any type of printer. The new Photoshop is **more visual** than Photoshop CS6, with inky CMYK images in place of the old-fashioned, flat grey of earlier versions. You can now distinguish different shades of blue and even individual highlights—perfect for creating neon-style color effects. In addition, there are delightful pop-ups to study, and many circles and lines for you to notch your knifework skills up. With millions of documents and photos in its database, and an unbelievably strong cloud-based library, Photoshop delivers some of the industry's most powerful capabilities—and it all depends on your work. So it's no exaggeration to say that Photoshop is the most popular tool for photo editing today. We can't think of any photo editing software quite like it.

Adobe Photoshop is the tool where professionals work to make their dreams into reality. Flash-style animation features remain the highlight of its design and its UI driven-design is way ahead with the world's most powerful tools. However, Adobe's science-based design and UI philosophy are not at par with other top-tier photo editing software, as most of the shortcuts and features designed for professional use are best-suited for creative endeavors. Adobe Photoshop Elements is a true contender among the major photo editing applications. Choosing Photoshop would deny a user of the opportunity to see Photoshop's trade-offs in the new versions. But, the element of simplicity and best usability makes it a unique name in the mix of tools and features offered by Adobe. Adam Shortnacy, Photoshop CTO, shared more on the new roadmap for 2D and 3D: "In the past, the 2D and 3D features have worked separately. With the higher stability of the native APIs, and the likelihood that the native APIs will remain in a future version of macOS, we've started the transition to native 2D and 3D effects using and." Look for a future roadmap that will let you layer 2D and 3D effects, and support for new apis like OpenXR for 2D, Articulated Skeleton for 3D and RightHand API for data-driven tools like the Paintbucket or Dilate & Erode. From now on, using a Pledge may come with a number of new, on-page features such as features that allow interactions with images, HTML sites, video, and contacts, and the ability to communicate with the community with web chat, online poll, and other rich web content.
